

PROJECT HELP (2nd PROJECT)

PHYSICS (INVENTIONS)

DUE DATE

None 2nd Project – Design a personal or family “Remember These Things” holder or tree. A holder/tree can be anything that **works** with the “Remember These Things” memory tools. Your instructor may provide you with materials to help, but you can use any resources you find (upcycling) and add any personal touch you choose.

Example: the picture frame (right) has wires added to it that serve as a place to hang things.

1. This project will NOT be submitted to your teacher.
2. Your creation can be stand alone or it can be hung on the wall.

A few sticks, tied together with string, make a very nice hanging tree (left). Feel free to be creative. If you choose to use supplies or resources you have been provided, your options will be more limited.

3. The goal is simply to make something to hold your “memory tools.”
4. You may paint, decorate, and/or add things to your project in a way that makes it work better, more unique, or special to you

IMAGES OF POSSIBLE CREATIONS WITH SUPPLIES PROVIDED:

For older students – supplies include:

- A Rod
- A Base
- A Recycled Tree Ornament with spindles
- Sandpaper

Glue may be required (hot glue or wood glue). The center disk may be painted.

For younger students – supplies include:

- A frame
- A support peg
- 2 thin rods
- Small gems

The gems are on double/stick strands (all gems hooked together) that will require scissors to separate.

Glue WILL BE required (hot/cool glue or wood glue) to add the 2 thin rods to the back side of the frame.
